

Model Geomètric (2)

IDI Q1 2014-2015

1

Model Fronteres: Cub

IDI Q1 2014-2015

2

Exemple: pintar cub aresta 1 centrat en origen

Pinta_Cara

```
void refresh(void) {
    glClear(GL_COLOR_BUFFER_BIT | GL_DEPTH_BUFFER_BIT);
    glColor3d (1,0,0);
    glBegin(GL_QUADS);
        glVertex3f(0.5,0.5,0.5);
        glVertex3f(0.5,-0.5,0.5);
        glVertex3f(0.5,-0.5,-0.5);
        glVertex3f(0.5, 0.5,-0.5);
    glEnd();
    glBegin(GL_QUADS);
        glVertex3f(0.5,0.5,0.5);
        glVertex3f(-0.5, 0.5,0.5);
        glVertex3f(-0.5,-0.5,0.5);
        glVertex3f(0.5, -0.5,0.5);
    glEnd();
    ....
    glutSwapBuffers();
}
```

```
Pinta_Cub (1);  
glutWireCube (1);
```

10

Models d'escenes : {models}

SC Aplicació versus SC Model:

- Global versus Local
- SCA => elements directament visualitzables
- SCModel => cal posicionar objectes abans de visualitzar-los.

IDI Q1 2014-2015

13

Moure/pujar
Trans(0,+h,0)

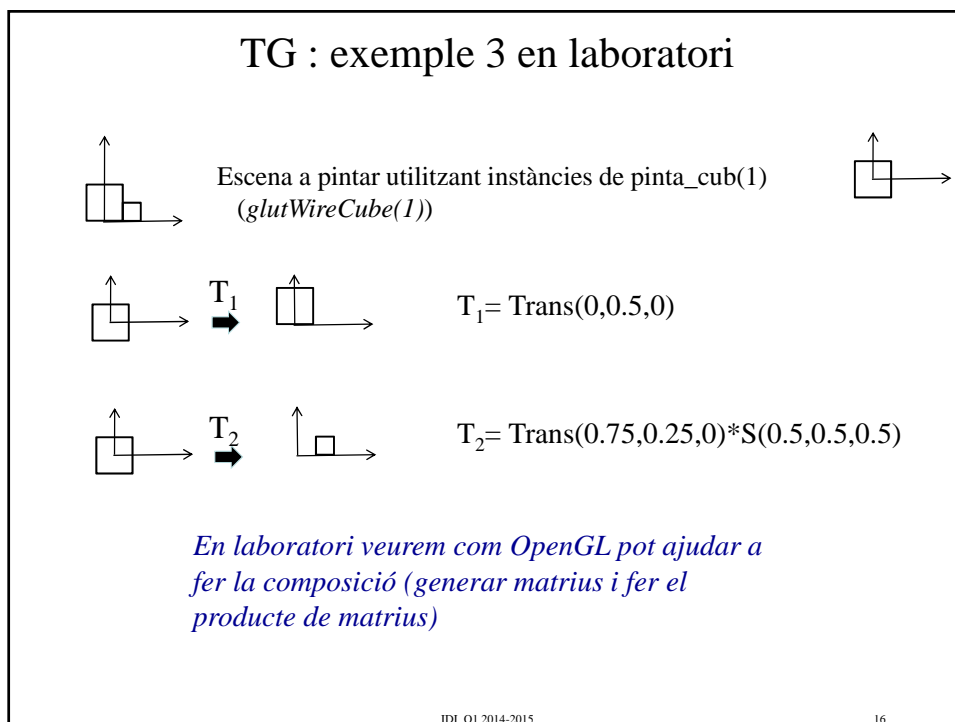

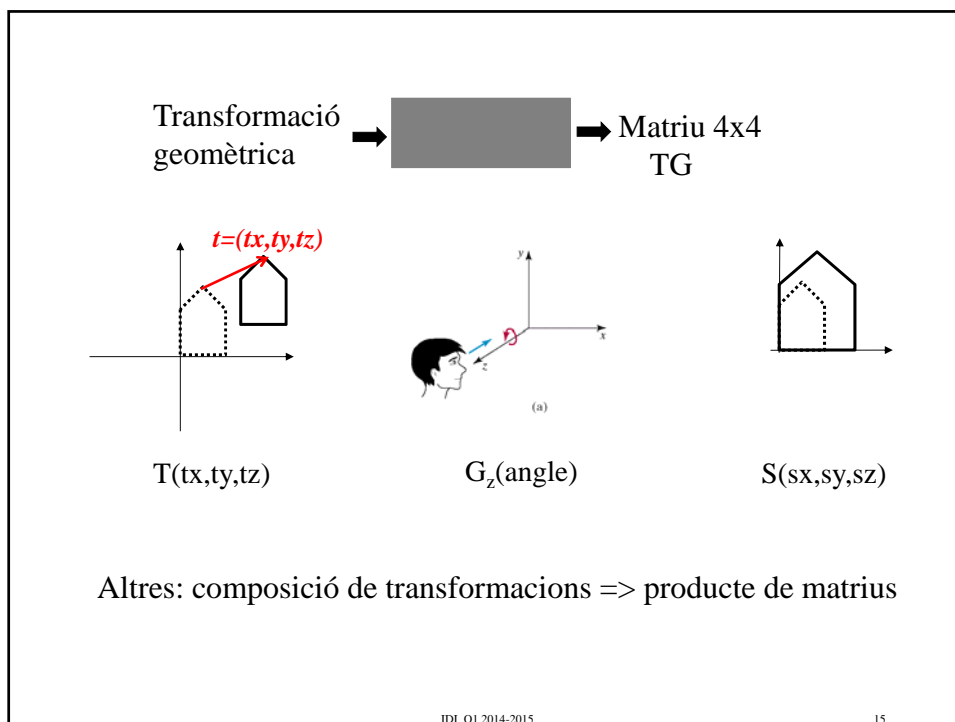

- Cal aplicar TG que modifica coordenades vèrtexs (i equació de les cares)
- TG queda definida per matriu 4x4:

$$\mathbf{V}_A = \mathbf{TG} \mathbf{V}_m = \mathbf{T}(0,+h,0) \mathbf{V}_m$$

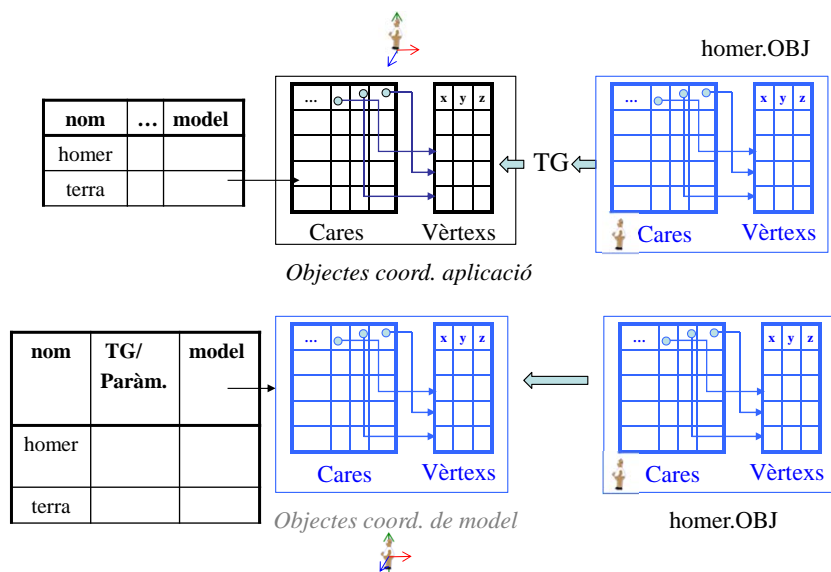

$$T(t_x, t_y, t_z) = \begin{bmatrix} 1 & 0 & 0 & t_x \\ 0 & 1 & 0 & t_y \\ 0 & 0 & 1 & t_z \\ 0 & 0 & 0 & 1 \end{bmatrix}$$
